Understanding MDR requirements and expectations

Tom Melvin, University of Galway

Well-Established Technology

Richard Holborow, BSI

MDR Article 61(10): Non-Clinical Data Only

Ivan Stoyanov, SGS Belgium

Quantification of Clinical Benefits and Outcomes

tbd

Surrogate Parameters

Michael D'Agosto, Hochschule Furtwangen

MDR Update

Round Table with distinguished Guests

Sufficient Clinical Evidence

Amie Smirthwhite, Independent Consultant

Legal Definitions & Terminology

Erik Vollebregt, Axon Lawyers

ISO 18969

Danielle Giroud, MD-Clinicals

Closing Panel

Richard Holborow, Tom Melvin, Erik Vollebregt

Join a community of regulatory, clinical, and quality professionals in a focused 10-part webinar series dedicated to mastering the clinical evaluation requirements for medium-risk (Class IIa/IIb) medical devices under the EU Medical Device Regulation (MDR).

This series is designed around what professionals need to know but often find overlooked in conventional training. Each session combines scientific integrity, regulatory insight, and practical application—brought to life by leading experts in the field.

All proceeds from this series support the **ECliPSE research project**, an Edvance MedTech initiative advancing the understanding of clinical evidence sufficiency for medical devices in Europe.

Sessions will take place weekly on Thursdays at 1:00 PM, beginning January 15, 2026, and continuing for a total of 10 weeks.
